

HALLIS HUDSON

how to...

## Measure Perfect Fit & Intu window blinds

I'm often asked about measuring for Perfect Fit and Intu systems and told that the systems seem a little scary to know what to do. With this in mind I've created this guide to measuring for both systems which should demystify what is a really easy system to choose and measure up, and I hope this guide helps you create truly stunning windows to fit seamlessly into today's interiors.

### The 2 systems...

Perfect Fit and Intu offer a solution to fit child safe blinds into double glazed windows. The systems have their own look which really comes down to personal preference. Perfect Fit has a colour match to frame surround and Intu has a cord guide placed into the existing window surround giving a more traditional look of blind.

#### Tools you need...

- ✓ Metal tape measure
- ✓ Metal ruler
- ✓ Depth gauge (optional)

# PERFECT FIT

## Things to check before you measure...

✓ Before you begin, ensure there is a minimum 6mm clearance all around the outside of your window beading to allow enough room for the Perfect Fit framework (Fig. 1).

✓ Check that the seals of your window frame do not protrude over the glass more than 6mm and that they are compressible. You can then take a bead to bead measurement as in Fig. 2 & 3. If your seals are not compressible (solid) and do not protrude over the glass more than 6mm you can then take a seal to seal measurement as in Fig. 2 & 3.

If your seals are none of the above please contact our sales team for further guidance.

## Measuring for Perfect Fit...

### 1. Measure the glass size

Measure the width and the drop of your glass size accurately to the nearest millimetre. We recommend that you measure in both corners and the middle of your window and use the smallest size taken (Fig. 2 & 3).

### 2. Measure the window depth

Measure the depth of the window (Fig. 4) this gives you the measurement from the face of the window frame to the glass (this is normally 18mm, 20mm or 24mm) and will determine the size of the window fixing.

### 3. Place your order

You should now have the following measurements to enable you to place your order - glass size and window depth.

Fig. 1

Fig. 2

Fig. 3

Fig. 4

## Measuring for Intu...

### 1. Measure the glass size

Measure the width and the drop of your glass size accurately to the nearest millimetre. We recommend that you measure in both corners and the middle of your window and use the smallest size taken.

### 2. Measure the window depth

To measure the window depth, place a ruler across the window & measure from the window out. Note where the tape measure meets the ruler against the frame. When you have chosen the profile that best suits the frame, match it against the diagrams in the profile pack to give the profile type required.

### 3. Choose your best fit profile

Select the appropriate profile pack for your chosen blind.

*Note: There are two profile packs available, one for Roller Blinds and one for Venetian & Duette® Shade blinds*

Place each profile against the glass and slide against the frame. When you have chosen the profile that best suits the frame, match it against the diagrams in the profile pack to give the profile type required.

### 4. Place your order

You should now have the following information to enable you to place your order - glass size, window depth and profile type.

# Ordering your chosen blind...

You can order your chosen blind at **halliswebshop.com** or by using one of our order forms and sending in by email or fax.

**Using halliswebshop.com to order your blind gives a number of advantages including...**

- ✓ Questions that ensure each element of your product are considered and filled in
- ✓ Clearly see all options available on your chosen blind type
- ✓ Help fields with technical information & helpful hints
- ✓ Eliminates errors being made when the order is inputted, importantly you get to see your order detail in full before confirming your order
- ✓ You can be confident that the blind you order is child safe as the questions are structured to only allow a child safe blind specification to be ordered – giving you peace of mind in what you order
